Motors and Generators

The engine is easily converted to run on compressed air using air hose and solenoid switches, that fit directly into the spark plug holes. Each piston is then timed by using the existing timing system of the engine, using 8 small electrical on/off solenoids.

The Penny Engine is a Wobbler engine that runs on compressed air. This type of engine is called a wobbler because there is no connecting rod or wristpin- the entire cylinder and piston pivot as the crank spins, and as it pivots side to side compressed air (or steam or compressed CO2) is ported in at the right time to push the piston down.
