### Endocrine disruptor - Wikipedia

As discussed above, the endocrine system evolved to function when unbound physiologically active ligands (hormones) are present at extremely low doses. Because of shared receptor-mediated mechanisms, EDCs that mimic natural hormones have been proposed to follow the same rules and therefore have biological effects at low doses (38, 118).

### Hormones and Endocrine-Disrupting Chemicals: Low-Dose ...

The nervous system releases hormones at synapses and the endocrine system releases neurotransmitters into the bloodstream. false During early embryonic development, a protein called sonic hedgehog is released from a cell and travels in a small gradient through the interstitial fluid only to nearby cells.

### Chapter 13 Endocrine System Practice Quiz Flashcards | Quizlet

And the endocrine system plays a vital role in emotions. Because the glands in men and women differ, hormones also help explain some of the observed behavioural differences between men and women. The major glands in the endocrine system are shown in Figure 4.19, "The Major Glands of the Endocrine System."
