The 1,450 cc Harley Davidson Engine, also known as the Twin Cam 88, was a breakthrough in motorcycle history when it came out. The engine was made and used on many different Harley Davidson bikes from 1999 to 2006. This engine has recently been retired and a new engine based on the 1,450 cc is being used in new Harley ...

Harley Davidson 1450CC's Engine Specifications | It Still Runs

The first Evo was a shovel based engine, with the Evo, non-vented heads. HD bought back the company from AMF in Feb of 1981, with it completely final (sale) in June. The Evo was released in 1984-1/2, 3 years later. It was Harley's answer to the leaky, low quality control issues with the Shovelhead engine. From the time line: 1984

Evo .vs. TC -- what are the strengths/weaknesses of the ...

These modifications will provide from 80 to 120 horsepower at the rear wheel of a late model 80 CID Harley-Davidson big twin Evolution engine. If you want to build your own Stage 3 engine, here are the part used to create an 82 HP engine that can be assembled over a weekend.

Harley-Davidson Engine Modifications

The 2013 TC engine is 15-20 plus HP/torque over the Evo, stock, and responds just as well if not better with mods to gain higher HPs and torque. It's also a much larger displacement. (80 vs 96, 103, 110) Cases is stronger, especially regarding cylinder studs and in the casting where the inner cam bearings sit, where the Evo cracks.

Evo vs Twin Cam power ? | Harley Davidson Forums

The 1,340-cc Evolution engine was used by all Harley-Davidson motorcycles built between 1984 and 1998, when it was largely replaced by the new Twin-Cam 88 engines. As of 2011, the Sportster remains the only model from the Harley-Davidson that still employs the Evolution engine, in both 883-cc and 1,200-cc variants.

Harley Davidson: Change The Oil In A 1340 Evolution

Harley-Davidson seems to work on a completely different clock, with new engine designs arriving every 15 years or so. Between 1936 and 2003, engine designs released by Harley represented a constant tweaking of the same basic V-twin, 45-degree, air-cooled engine design.

How Harley-Davidson Works | HowStuffWorks

The total displacement of the 88 twin cam engine is 1450 cc, or 88 cubic inches. The 88B is 96 cubic inches, for a total of 1584 cc displacement. This is a marked improvement over the previous engine models, allowing for greater horsepower for the motorcycles. Spark Firing. One of the most revolutionary systems within Harley Davidson's 88 and
