The McuFriend shields are designed to work from 5V supply and use 3.3V reference for the logic. The TFT panels come in many shapes and sizes with different controllers. The backlight LEDs often take too much current. You can feel them getting warm/hot. On the older mcufriend pcsb there is a separate AMS1117-3.3 regulator for the backlight.

TFT LCD Display Module 480X320 driven with FSMC. I have recently bought a 3.5" inch TFT LCD Touch Screen Display Module 480X320 with a www.mcufriend.com label on the back side. The display was equipped with an 8bit parallel interface. First I decided to test it with the UniGraphic library using the BUS\_8 protocol. The display was very slow but improved when I switched to the PAR\_8 protocol.
