Ordinary and Partial Differential Equations, Raisinghanja ...

In mathematics, an ordinary differential equation (ODE) is a differential equation containing one or more functions of one independent variable and the derivatives of those functions. The term ordinary is used in contrast with the term partial differential equation which

Raisinghania

An ordinary differential equation is a differential equation where X is locally \mathbb{R} , while a partial differential equation is any non-ordinary differential equation. However, the main difference between locally \mathbb{R} and locally \mathbb{R}^n with $n > 1$ is that the geometry is much more complicated in the latter.

What is the difference between ordinary differential ...

An ordinary differential equation (ODE) is an equation that involves some ordinary derivatives (as opposed to partial derivatives) of a function. Often, our goal is to solve an ODE, i.e., determine what function or functions satisfy the equation. If you know what

PDEs are used to formulate problems involving functions of several variables, and are either solved by hand, or used to create a computer model. A special case is ordinary differential equations, which deal with functions of a single variable and their derivatives. PDEs can be used to describe a wide variety of phenomena such as sound, heat, diff
