Whether you're cycling, running, or planning for a triathlon, cardio exercise should come first. By focusing on aerobic exercise, you will get the maximum performance from your muscles in the area where they need it most. Strength training should be secondary, performed after your cardio workout, or on rest days.

Cardio or strength training, which comes first ...

In Which Comes First, Cardio or Weights?, physicist and award-winning journalist Alex Hutchinson tackles dozens of commonly held beliefs and looks at just what research science has—and has not—proven to be true: Should I exercise when I'm sick? Do I get the same workout from the elliptical machine that I get from running?
